Let's compare
Indonesian companies
around the world.

It is said that the amount of foreign capital flowing from the
 developed countries to the developing countries is increasing
 rapidly. In fact, it is not only the amount of capital that is
 increasing, but also the number of companies that are
 operating in the developing countries. This is due to the
 increasing demand for goods and services in the
 developing countries. In addition, the cost of labor is
 lower in the developing countries than in the developed
 countries. This is one of the reasons why many
 companies are moving to the developing countries.
