ISOE INFORMATION SHEET

EUROPEAN DOSIMETRIC RESULTS FOR 2015

ISOE European Technical Centre - Information Sheet No. 60

This ISOE Information Sheet presents the average annual collective doses per reactor (PWRs, VVERs, BWRs) for the period 2013-2015 in the European countries participating in ISOE.

In 2015 the average annual collective dose per reactor for PWRs slightly increased from 0.58 to 0.60 man·Sv, mainly due to Swiss and Belgian results (see Table 1).

Regarding VVER reactors, a slight decrease is observed in terms of average collective dose per reactor from 0.43 to 0.40 man·Sv, mainly due to Finnish and Russian results.

Regarding BWRs, the average annual collective dose per reactor increased from 0.88 to 0.99 man·Sv, mainly due to the Spanish result (outage) (see Table 2).

The evolution of the 3-year rolling average annual collective dose, which provides a better representation of the general trend in dose, shows a stability of PWR average, a decrease for VVERs and an increase for BWRs (see Tables 3 and 4).

Regarding VVERs, the Czech Republic presents the lowest 3-year rolling average annual collective dose per reactor in 2013-2015 with 0.13 man·Sv per reactor, followed by the Slovak Republic (0.15 man·Sv per reactor), Finland (0.32 man·Sv per reactor), Hungary (0.41 man·Sv per reactor) and Russian Federation (0.56 man·Sv per reactor) (see Figure 1).

For European PWRs, the data per country show that with respect to the 3-year rolling average annual collective dose for 2013-2015, three main groups can be distinguished (see Figure 2):

Belgium, Germany, United Kingdom:

Between 0.2 and 0.3 man·Sv per reactor

Spain, Switzerland, the Netherlands:

around 0.4 man·Sv per reactor

Sweden, France, Slovenia:

between 0.6 and 0.8 man·Sv per reactor

The 3-year rolling average annual collective dose per reactor for BWRs are quite similar in Germany, Sweden and Switzerland around 1 man·Sv per reactor. Finland is presenting the lowest value with 0.35 man·Sv per reactor and Spain the highest value with 1.67 man·Sv per reactor (see Figure 3).

For further information on the evolution of collective doses in different countries, please refer to the Country reports in ISOE Annual Country Report published on the ISOE website (www.isoep-network.net).
